

processing tomatoes

- Reduces transplant shock
- Increases root and shoot vigor
- Increases fruit sugar (brix)
- Improves percentage of marketable fruit
- Increases yields and returns

kelpak

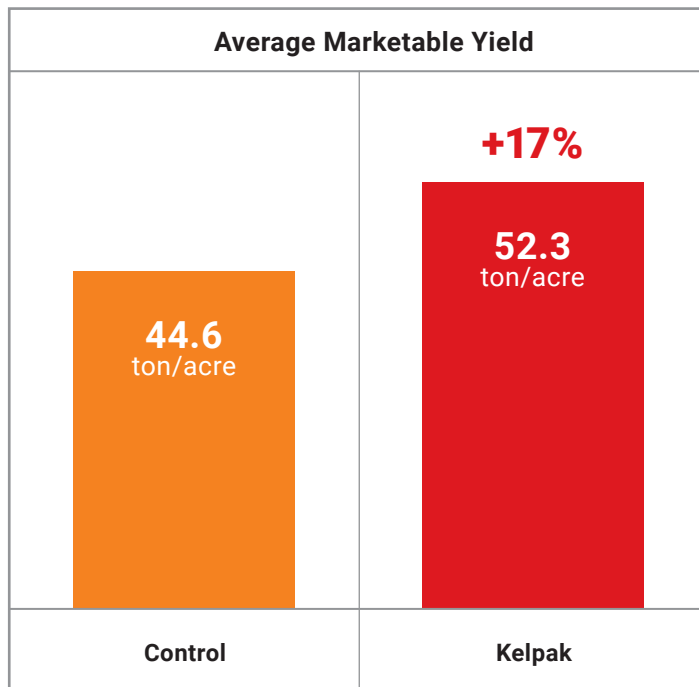

Kelpak is a natural liquid seaweed extract manufactured from the brown kelp *Ecklonia maxima*, found on the west coast of South Africa. Produced using a cold cellular burst extraction method that preserves its delicate compounds, Kelpak significantly improves marketable yield in processing tomatoes.

A global leader in seaweed products for over 47 years

Processing Tomatoes - California

Numerous trials on several different varieties of processing tomato conducted by University of California and independent contractors showed an average increase of 17%

+17%

Recommended Kelpak application timing and rates

Seedling dip

Water seedling trays or roots with a 1% Kelpak solution before plant-out

Rate 1% dilution

Foliar spray

Follow up with a 2-3 pints per acre foliar spray 14 days after transplant

Rate 2-3 pints/Acre

Repeat foliar spray

Repeat foliar spray once or twice at 14 day intervals

Rate 2-3 pints/Acre

Alternative fertigation: Apply Kelpak at 4 pt/Ac as a pulse through drippers 1-2 weeks after transplant

Rinse lines after pulse

Maintain pH below 7

Kelpak can be used together with most agrochemical tank mixes

plant growth in harmony with nature
